

KitVac Secures Canadian Patent for it's new FLUSH Dustpan

Following on from their successful US patent, Scott Cleary (Director of KitVac Int. P/L) said he was thrilled to finally get the notification from the Canadian Patent Office.

We are just in the process of sending another 2,400 dustpans into Europe as demand for the new FLUSH slim like design is increasing. Additionally we now have 4 x distributors in US market which has further increased our coverage and ease of supply.

Customers are always looking for something new and a good example of this was our biggest home show here in Melbourne (Australia) whereby a CV company (Vac City) picked up a 14 x new villa supply with CVS installations and KitVac dustpans. What's ironic here being, the builder had stopped putting CVS into their houses and it was only by chance he seen the new dustpans and commented on their new slim design....

Fortunately for us, there has been some pro-active manufacturers who have installed the new dustpans into their homes (one actually being the president) and now 12 months later have started to both market and secure genuine new business as a direct result of presenting our new dustpan. We now have a convenient E-Flyer (see below) and shortly will have an exact size DL flyer dustpan for end users.

For Key distributors and product orders direct from:

Canada : Tip Top Parts / info@kitvac.com
USA : Steel City Vacuums / Desco / Tip Top Parts US / AE Carter
Europe & Asia Pacific : info@comfortsystem.com.pl / info@kitvac.com
